

13 January 1975

TRENDS AND HIGHLIGHTS
Special Security Center
December 1974

1. The coordination process related to the revised TKH Manual was considerably slowed down during the holiday period. A draft manual, however, has been prepared for early consideration by COMIREX.
2. A security manual establishing a new special security control system for the dissemination of intelligence products derived from a highly sensitive national intelligence program was coordinated throughout appropriate elements of the U. S. intelligence community and forwarded to the DCI for approval and signature.
3. Seventy-eight (78) CIA employees were briefed on 169 security compartmented matters. The SSC has received a number of favorable comments on its progress in upgrading the compartmented intelligence security indoctrination of CIA personnel (an SSC MBO--OS level track). Twenty-one (21) non-CIA personnel were also indoctrinated into 47 separate compartmented matters. These included officials of the National Security Agency, White House Offices (including the National Security Council and the Office of Management and Budget), the Departments of Agriculture and Transportation, General Services Administration, the Drug Enforcement Administration, and the National Security Agency.
4. Facilities at the following locations were accredited for the storage and handling of various compartmented intelligence materials:

25X1A

6. A waiver was approved for NPIC providing relief to some of the security accountability requirements for internal working materials.
7. Recovery was effected of all copies of a TOP SECRET/COMINT document inadvertently forwarded to Defense attache's through normal courier delivery channels.
